PHP,PYTHON,HTML,CSS,JAVASCRIPT,JQUERY,AJAX,

FALCON API,POSTMAN,GIT,BITBUCKET,REST API

FRAMEWORK:LARAVEL,CODEIGNITER

DATABASE: MYSQL,MONGODB

PROJECTS

- **Mechtrix India:**

Short Description: This system centralizes customer relationship management and process management, allowing users to send quotations, proposals, create leads, authenticate customers, manage tasks, and more, streamlining business operations efficiently.

Used technology: php,codeigniter,mysql,ajax,html,css,javascript.

Roles and Responsibilities: Identify the specific features and user interactions required by customer application, such as forms for submitting data, interactive elements for displaying information, and navigation menus. Establish a connection to the database server from your PHP code using appropriate credentials and connection parameters. perform database maintenance tasks such as optimizing table structures, indexing frequently accessed columns, and cleaning up outdated data. Set up automated backups to ensure data integrity and disaster recovery in case of database failures. Use debugging tools and techniques to identify the root cause of problems, such as logging errors, inspecting network requests, and tracing code execution.

- **Pac Smart:**

App: Compressed Android App

Short Description: This system facilitates comprehensive branch management, enabling branch-specific authentication, control over inventory, and handling of stock notifications. Through tailored branch-wise authentication mechanisms, it ensures secure access while streamlining stock management processes, including receiving and processing stock notifications efficiently.

Used technology: php,codeigniter,mysql,ajax,html,css,javascript

Roles and Responsibilities: Responsible for resolving frontend functionality issues and establishing seamless connections with the database to ensure smooth data flow and interaction within the application.

- **Veera Cabs:**

Used technology: Php,Laravel,mysql,ajax,html,css,javascript

- **Short Description:** An online cab booking platform that integrates secure payment gateways, offers seamless booking experiences, and delivers timely notifications to users. Streamlining the process, it ensures convenience through payment options, while enticing users with exclusive offers and keeping them informed with timely updates.

Roles and Responsibilities: Responsible for managing frontend functionalities, crafting RESTful APIs, establishing robust connections to the database, and adeptly resolving any encountered errors to ensure smooth application performance and user experience.

- **Audaz(Exam portal) :**

Used technology:Php,codeigniter,mysql,ajax,html

Short description : A comprehensive student login system for exams featuring exam-specific scheduling with set times and dates, along with duration management. Notifications are provided to students regarding exam timings, and upon completion, results are furnished indicating correct and incorrect answers for multiple-choice questions (MCQs) and other test formats, enhancing the learning experience and assessment process.

Roles and Responsibilities: Handling for designing and implementing frontend functionalities tailored to client specifications, ensuring an intuitive user experience. Additionally, tasked with maintaining the database, guaranteeing seamless data storage, retrieval, and management to support the application's backend processes effectively.

- **Spin Wheel , Roll Dice ,Scratch card**

Role: Backend Developer

Frontend: Html , Css , Bootstrap , Javascript,Jquery,ajax

Backend : Php

Database: Mysql,Mongodb,falconapi,rest api

Short Description :-Users fill out a form with their valid phone number to participate in the campaign.Perform validation checks to

ensure that the provided phone numbers are valid and comply with the required format. Users who submit valid phone numbers are directed to a spinning wheel interface. They spin the wheel to receive a random offer. Each segment of the wheel corresponds to a different offer. Once the wheel stops spinning, the selected offer is displayed to the user. After the offer is selected, trigger an SMS to the user's provided phone number. The SMS should contain details of the offer they won, along with any instructions or redemption codes.

Roles and Responsibilities: Design database schema to store game data efficiently. Use a relational database management system using MySQL. Write PHP scripts to interact with the database. Write PHP code to handle HTTP requests and responses according to the RESTful api. Handle the responses from the server-side using JavaScript. Update the UI dynamically based on the received data. Deploy application to a web server. Ensure that all dependencies are installed, and the server environment is properly configured.

- **Support Panel:**
- Used technology: Php, laravel, mysql, mongodb, ajax, html

Short Description :- Developing a user account creation system triggered by DLT-compliant SMS, enabling seamless registration. Incorporating a search feature allowing users to locate files by specific criteria like sequence number. Additionally, implementing email notifications to efficiently share relevant details and updates with users.

Roles and Responsibilities: Responsible for resolving frontend functionality issues, seamlessly integrating API data into the application, and dynamically manipulating data to meet panel requirements. This role ensures the smooth operation of frontend features while effectively leveraging API resources to fulfill the panel's specific needs.

Whats App

Used technology: Php ,laravel,mongodb,meta facebook,ajax,html

Short Description : Designing a marketing campaign tailored to WhatsApp numbers based on client-defined profiles. This campaign includes options for various message formats such as text-only, text with images, text with videos, and messages with placeholders for personalized content. This approach ensures targeted communication that resonates with the selected audience segments, enhancing engagement and conversion rates.

Roles And responsibilities: Design and develop the frontend interface for managing the campaign. Implement features for creating and scheduling different types of messages (text, image, video) through the WhatsApp number. Integrate WhatsApp APIs to enable message sending functionalities. Write API calls in a proper way to ensure smooth communication between the frontend interface and the WhatsApp platform..

Operating System

WINDOWS 8,10,11

Linux

Editor

Notepad, sublime, nano, vim, visual studio

General Info:

- Good speaker & listener
- Analytical Thinking
- Quick learner
- Leadership
- Time Management
- Multitasker
